Symposium on Pathogenesis, Biomarkers and Therapeutic Innovation
Sept. 15th-17th

Goals of the conference:

The International Symposium on IgA Nephropathy is an international symposium that has been held every 2-3 years since 1983. The coming 14th symposium will be held in Tours, France.

The committee members of the International IgA Nephropathy Network encourage scientists, physicians, and students in many regions of the world to attend to the symposium and to encourage international collaboration in clinical and basic science research.

Main topics:

IgA nephropathy is the most common glomerulonephritis throughout the world. This disease is characterized by deposition of the IgA in the glomerulus.

There are other diseases associated with glomerular IgA deposits, the most common being Henoch-Schönlein purpura.

The program of symposium will focus on the pathogenesis, biomarkers and treatments of IgA nephropathy.

Welcome reception at City Hall of Tours
